

Opportunity. For Service

Out of the 'Writer of War Has
Grown a Greater Understanding'

The opportunity for service was never so great as it is now. The reason is that in the last few years, the world has changed.

Now, time and distance have been annihilated by science, and radical prejudice and fear have been changed into mutual confidence and understanding on the staff of the World War. I do not proclaim an ideal state, nor desire to suggest so positive an attitude, merely mean that in common suffering was found a greater capacity to see each other in a more generous light and to know each other in a more helpful way. I mean that, in this great companionship of men and youths of many nations, ideals and ideas we once have believed peculiarly our own were found to meet unlike those of our friends from other lands.

We learned that their hopes and aspirations were those we had ourselves. We came to believe that the things we had in common were greater far than those which divide us. Out of this fuller knowledge of each other, from a free and frank interchange of thought has grown, as I say, a greater understanding and a finer sympathy, upon which peace may be built on the true structure of a common purpose.—Premier Bennett at Syracuse.

An Unique Will

Ontario Doctor Had a Very Fine Sense of Humor

Toronto has some unusual wills in its records, one of which, written by a rhyming clergyman, may be seen in the Surrogate Court in Osgoode Hall. That of the well known "character" Dr. Dunlop Gooderich, O.M., is famous and often quoted. Here was a man of rough-and-tumble humor.

"For as my estate was left to a sister 'because she was married to a snifter whom she suspects,' and as she is another sister 'because she is married to nobody, nor is she likely to be, for she is an old maid' also. I leave my late brother's wealth to my brother Shandy, exhorting him at the same time to give up Whiggery, radicalism, and all other sins that do not really best him." A friend is left "a 'silver soap,' to the end that he may drink tea therefrom, to comfort him under the affliction of a saltatory wife." To a third sister "because she is an old maid and plump, I give my silver cup, with a sovereign in it," also my greatest must be as it looks dearest to see an old woman taking snuff."

Trout Fishing in Saskatchewan

Great Success Has Attended Efforts
Of Fish Culturists

Anti Antelope Lake to the Saskatchewan waters were trout raised in unfamiliar environment have thrived well.

Leven trout fingerlings placed in Antelope Lake by the Fish Culture Branch of the Canadian Government Department of Fisheries in 1920 had reached a length of as much as sixteen inches in 1931, although these game fish are not indigenous to this particular body of water. The case is another example of success met with by the fish culturists in introducing different varieties of fish into areas where they were previously unknown. Most of the work of the Canadian Government Fish Culture Branch is concerned with maintaining and increasing the stocks of commercial fish, but in a number of cases, in different provinces, the Branch has also given attention to efforts to widen the angling resources of the country, and what has happened at Antelope Lake is an instance in point.

How to make cast net ring, do that bells could be made from it, was once known to the Chinese, but is now a lost art.

"The above smokes. What can I do?"

"Throw in a couple of those cigars you give me. That will stop it."—Wahne Jakob, Berlin.

Weird Inventions

Strange Ideas and Contraptions Revolved In U.S. Patent Office

People who have been looking for a tapeworm trap, an air-cooled rocking chair, swivel for their chickens, but lets that about around corners, or even a device for creating and maintaining dimples, are being referred to the United States patent office where specification of such articles are on file, duly stamped with the government's approval.

"Two men have piled into their patent office records and out of their labors has come a compilation of strange inventions, which will be published under the title "Beware of Imitations." The contrivances have been designed for a wide variety of purposes. There is, for example, a combination grocer's package, grape ailer and mouse-and-fly trap. A balloon propelled by increasing engine or vulcanite, patented in 1887, is pictured and described. There is a wickerless rocking chair with hinges by the simple device of having tracks on top of the case and ramps at either end so that if another train comes along, it will run up over the top and down again.

Two methods of awakening the commuter are included. One is an alarm clock attached which sprays water on the sleeper's neck, while the other drops 80 or 90 wooden blocks on the face.

A self-tipping derby hat, patented in 1896, contains a mechanism in the crown. The gentleman when the hat approaches, bows slightly whereupon his hat tips by itself, leaving his arm free, presumably to shake hands.

An electric bed extender is so designed as to "kill or startle" the bug in which case, it will be more than enough to insure its return in the direction where it came to.

In 1898 a novel idea of coffin was proposed. It was a coffin with a head, ending to the surface of the ground, and is equipped with a small ladder for climbing out and a ball for rolling the coffin. The coffin is supposed to be buried prior to death. The problem of shoving horses and cows on railroad tracks was solved in 1924 when a patent was issued for a locomotive attachment which throws a stream of hot water some distance ahead, thereby enabling the engineer to warn them to stand their distance.

The tapeworm trap, patented in 1884, is attached to a string and swallowed, whereupon, in the inventor's words "it worm enters the bait, and its head is caught in the trap." All that remains to be done is to pull the string.

The air-cooled rocking chair is equipped with a bellows beneath the seat and a snake-headed pipe running up the back and out over the rockers' head, so that he gets puffs of air on his scalp with each rock.

And an improved foot-warmer consists of two tubes extending to a single nozzle through which the foot is inserted and the warm breaths into his heels.

Edinburgh Floodlights
Stone Of Remembrance

Stones Clearly Framed in Archway
Gives Striking Effect

A flood-lighting scheme has been tried in a very effective way at Edinburgh's Stone of Remembrance in front of the City Chambers in the High Street. Until recently the Stone was not so prominent at night as it might have been, merely sharing in the ordinary illumination of the archway is front of the City Chambers courtyard. Some time ago the Town Council decided to take action, and a powerful floodlighting system was installed in the arch above the Stone. The effect at night is striking, the Stone standing out clear and white, framed in the archway.

How He Knew

Father entered the room in a very noisy manner.

"Look here, Mary," he said to his wife, "that boy of ours has taken some money out of my pocket!" "Oh, Herbert, how can you say such a thing," reproved his wife. "You might as well accuse me." "Not at all, Mary. It wasn't all taken."

Table salt and other valuable by-products are being obtained from the brine of a well in Oklahoma, used for cooling the condenser water of an oil refinery.

Praynow was the name of a coin in Louisiana worth six and one-quarter cents.

Denmark's has printed all foreign bank bills to leave the country.

CANADIAN WOMEN JOURNALISTS MEET IN ROCKIES

The Ontario delegation to the sixth triennial convention of the Canadian Women's Press Club, guests at the Banff Springs Hotel, paused for a photograph before exploring the beauties of the Canadian Rocky Mountains. In the group are: Mrs. James, Detroit News; Miss Dickson, Mrs. Robert Ogle, Ottawa; Miss Isabel Armstrong, Ottawa; Miss Eleanor Stevens, London; Miss Margaret McCrimmon, President Toronto Branch; Miss Charlotte Whitton, Ottawa, and Miss Lila Donley, Kitchener.

Sailing Into the Arctic

Unique Expedition Set Sail For Land
Of Eternal Snows

There is an expedition sailing into the Arctic that must be unique among the many expeditions that have voyaged amid Arctic splendours in recent summer months.

This one now on the water is unique for several reasons. It is led by that Arctic veteran, Captain "Bibi" Bartlett, who conveys a dual interest. For he goes Arctic-bound to erect a monument to the memory of Admiral Peary, and when Peary was on the trail to the discovery of the North Pole in 1909, Bob Bartlett was the white man he met farthest with him.

The Arctic has its terrors, but while they barely may be imagined, the Arctic has its beauties. The woman on the wharf who bids good-bye to this expedition accompanied Peary as his wife when he did his best geographical work in Greenland. She was at his headquarters at Inglefield Bay when the "Shore Baby" was born. And when the "Shore Baby" herself is returning in the Bartlett expedition to the scene of those explorations of forty years ago.

Peary's daughter, Mrs. Stafford, has been invited to unveil the monument being erected to the Pole discoverer. Fittingly enough she takes with her her own two boys, Peary's grandsons. The gathering partakes almost of a home town reunion.

The materials for the monument are being transported by Capt. Bartlett, but he will pick up most of them at his home, at Inglefield, Newfoundland. When he sails in there he will drop off a few presents for his mother. He is on board for her a Jersey cow and two pigs.

Did ever expedition so homely face the "terrors of the Arctic"? The thought must have occurred to Matt Inuit, the white-haired sledge man who joined with Mrs. Peary in visiting the voyager's pleasant trip. He recalled the day when he stood with Peary at the North Pole.

The more, in fact, you learn of this interesting Arctic expedition, the more you agree with Alice, that the customer and customer it grows.—Winipeg Free Press.

Where Volcanoes Abound

Sea Floor, Off Coast Strait Henry—
Combined With Craters

High craters of former volcanoes divide the bed of Cook Strait, which divides the North and South Islands of New Zealand. Instruments have been fixed from the British Admiralty were used to trace the ocean bed and the chart reveals that the floor of the strait is beset with volcanic craters of incalculable depth. The whole sea at some time has been shattered by eruptions and earthquakes.

Helping Him Out

Confused Shopper: "I want a pair of eye-stommed hornblades—I mean sporn-tommed hornblades—dash it! I mean heck-rimmed hornblades!"
Policeman: "I know what you want, sir. Mr. Brown, show the gentleman a pair of rim-sporned hornblades."

In the buildings of ancient Rome, nine different kinds of colored marbles were widely used, and many other rarer kinds were occasionally introduced.

Population of Russia is estimated at 147,013,000.

The potato contains 87 per cent. water.

A New Eden

Leaves From Fig Tree May Be Used
By Deskholders On New

Island Howe
Nature has been kind to the Deskholders who are to be interested on Fern Island and their clothes for modern ideas of dress. A fig tree has been discovered blooming amid the forest cover of the island.

According to officials supervising the construction of compensated hulls, the Sons of Freedom may, if they desire to abandon modern dress, supply themselves with similar garments to those favored by Adam and Eve.

Just where the fig tree came from, or who planted it, is a mystery to officials, but they claim that it is large enough to supply a generous quantity of leaves for the clothing of the new residents.

Forming Corporation

Frank J. D. Barnham Will Carry On
Forest Conservation Work

Frank J. D. Barnham, of Montreal, Annapolis Royal, N.S., and Victoria, is forming a corporation named the Barnham Forest Foundation, to carry on the forest conservation campaign and "have the big trees" movement inaugurated by him.

He has enlisted the support of his family together with the funds which he allotted to them in 1920 when he retired from business and divided his fortune between his family and his forest conservation fund.

By this method of financing his big tree purchases nothing will be diverted from his forest conservation work, so that both may be carried on at the same time.

Temperature To Order

Heating and ventilating engineers are working on a plan for the control of atmospheric conditions within the home. The new perfected average household will be able to press a button in winter and produce a climate in his home rivaling the pleasant days of the southland and press another button in summer to bring the invigorating and bracing air of the mountains and seashore to his abode.

Oil extracted from cherry pits is now becoming commercially valuable.

Creek music, the lyre and others being much more important.

Latvia has established import quotas for wheat and cotton.

Hong Kong Bays Frozen Fish

New Departure From Frozen Fish
British Columbia Producers

White residents of Hong Kong, China, have recently been introduced to a new fish food from British Columbia in the shape of frozen herring and they are reported to have received it with relief. Enterprising fish people in British Columbia, alert to find and develop new markets, have discovered that their frozen herring are welcomed in the British settlement at Hong Kong. In preparing the herring for this trade the producers select first quality fish, freeze them without salt, and put them up for market in 50 pounds cases. Several shipments were made to Hong Kong during the herring fishing season just ended on the east and west coasts of the great island.

For many years, the great fish producers have done a large business with China in dried herring but the export of frozen herring to Chinese ports is a new departure. The dried herring shipped to China are used by the Chinese people themselves while the sale of frozen herring to Hong Kong has been made to white consumers.—St. Thomas Times-Journal.

Huge Locomotive Is Ordered By Soviets

Manchurian Firm To Supply Heaviest
Engines Used In Europe

An enormous locomotive is to be built for the Soviet Government by a Manchurian firm.
It will be of 8 feet gauge, and will be virtually two locomotives with one boiler. It will have 28 bogies and coupled wheels.

The locomotive is to be shipped to Leningrad in time for service next winter and it will rank as the heaviest locomotive built in Europe for any broad-gauge railway.

Although the weight on each pair of axles will not exceed 19 tons, the engine will have a total weight in working order of no less than 280 tons, and will be required to haul train loads of not more than 2,500 tons.

Expert rug and carpet makers in Green now number 30,000.

London has many murder mysteries.

China shoe stores are being opened in Tientsin.

Fewer Spinsters In The World

Number Of Women Increasing Rapidly
More Entering Marriage State

There are fewer spinsters in the world, and they are becoming fewer each year. Yet there are more women.

In Britain the marriage outlook for women is growing steadily brighter, for while 50 years ago 3,000 out of every 10,000 women in England remained single, the proportion is now down to 4,800, while in Scotland there has been a similar decrease. Fifty per cent of the women in Australia and New Zealand were unmarried in 1901; now there are 43 per cent.

Denmark has fewer spinsters also, but Japan and Italy have increase in number.

There are 880,000,000 spinsters in the world, of whom Britain has 8,000,000, the United States 11,000,000, and France 8,000,000.

America had 297 adult spinsters per 1,000 women in 1910. Ten years later there were 273, and now only 264 of them are spinsters. This despite the fact that for years more women have been dying in comparison with boys in America.

In Germany the population was 57,700,000 in 1910 and 63,400,000 in 1926—an increase of 4,700,000.

But the number of unmarried women remained almost stationary. There are about 16,000,000 of them, and in this 15 years of growing population only increased by 36,000.

In France today 44 women in 100 are not married, against 42.2 in 1900, despite the fact that the "excess of women over men—the surplus" women have not doubled since pre-war years.

There were 8,883,400 spinsters in France in 1921, and the figure fell to 8,268,240 in 1928. Married women numbered 6,480,000 in 1921, and 9,184,438 in 1928—an increase of 688,238, or about 10.6 per cent.

These figures are of vital importance to every woman in the world—but so no one seems to explain satisfactorily the excess of women over men and fewer spinsters.

There were more marriages at all ages in 1927 in England and Wales than in 1926—30,000 instead of 29,000—but there were fewer women married between the ages of 30 and 34—30,000 instead of 45,000.

In Switzerland there were slightly more marriages in 1927 than in 1924, 28,585 instead of 28,510, but the number of marriages between the ages of 30 and 39 dropped from 8,115 to 6,876.

There have women, according to statistics, a better chance of getting married?

Some experts say marriage is entering into more lightly and that thousands of men and women who would not otherwise, because their wives have employment and are self-supporting.

War On Crows

Saskatchewan University Plans That
These Birds Eat Great

To settle the question of whether or not the crows are more useful or injurious to the farm, a post mortem was held at the University of Saskatchewan, and the result has brought about a renewal of the warfare against the large black birds.

Some persons contended the crows lived largely on culiverts and other pests; while others believed they subsisted largely on grain and that their spoils were enormous.

Here is what six stomachs of crows contained: Six stones, 46 maggots, many dry grass stems, one hind leg of a rabbit, one scrap of meat, small scraps of carrion; and in three of the six, from 23 to 70 kernels of wheat.

Modern Economies

Down at Fort Scott, Ontario, a farmer was looking at a \$117.00 suit in a shoe window. "If I had mackinac 243 pounds of wool," said the farmer, "and if my check for the proceeds were \$50 cents higher I could buy that suit."

If only fathers could find the inventor of unbreakable drums for children.—Blunt Humor, Madrid.

WORLD HAPPENINGS BRIEFLY TOLD

Sir Richard Tredwell who developed methods of spreading smoke screens and the use of tracer bullets is dead.

An invitation to join the League of Nations was accepted by Turkey at a special meeting of the national assembly.

Most purchasing for the British army and air forces in England in the last year weighed 29,000,000 pounds.

The U.S. Department of Agriculture has developed an "apartment" house for hens. It contains three stories.

The Alberta government has appointed a commission to study possible methods of health insurance in the province. The commission will report to the next session of the legislature.

From the mudmothered bed where it has lain for 11 years, the "Tiger," American war vessel sunk at Point Bay, Ontario, can be raised without difficulty, Captain Robert Carson, Midland, Ontario, reports.

Three days after it went on the market, Ontario's \$50,000,000 bond issue was fully subscribed. The proceeds will be used to repay short term advances incurred for capital expenditures.

A floating university on a liner which sails from New York in the fall will touch 45 countries and 43 ports in its 35,000 mile tour of the world.

The British Government has no intention of returning to the gold standard in the immediate future. Neville Chamberlain, chancellor of the exchequer, told parliament after air traffic between London and Paris were broken during the year just ended, 20,115 being carried in comparison with 20,104 in 1928-29, the previous record twelvemonth.

New York's Leaning Tower

Unlike Wonder At Pisa It Leans Different Ways

Perhaps few people realize it, but New York City has its own "Leaning Tower," the new H. L. Doherty Building, now far from being like the tower under at Pisa, New York's tower leans sometimes one way, and sometimes another. When first tilted, that it was leaning toward the west, but the question another test was made next day, and it was found that the tower leaned toward the west. It was finally discovered that the best of the sun expanded the metal on one side or another, causing a variation of four inches at the top.

Soldier's Mother Honored

For the second time a woman has had the honor of reviving the Flame of Remembrance which burns day and night over the tomb of the French military soldier beneath the Arc de Triomphe. She was Madame Duval-Arnould, wife of one of the members of parliament, who lost one of her five sons during the world war.

Not An Experiment

W. K. Kellogg says he desires to sell more of his package cereal, so he is going to spend an extra million dollars in advertising. What's more he will spend nearly all of it in newspapers. He's not experimenting, but merely following the plan on which he built his business.

This Business Is New

British Columbia Beats His Hens To Customers

"Pay-as-they-lay" is the new policy upon which George McCroft, Sunny-side poultry rancher, disposes of hens. The plan enables a man without much capital to get into the poultry business by leasing hens.

Mr. McCroft had a customer in Vancouver for exceptionally large eggs. At current prices McCroft could not supply the man with eggs and keep even the best hen. He substituted upon the plan of letting the customer have 100 hens on a rental basis. "They do it with dress suits, radios, car batteries and drive-motor autos, so why not with laying hens?" was Mr. McCroft's comment on the deal.

The result is that the hens earn Mr. McCroft a tidy return upon investment, and he is assured against charges for feed and housing. The man who rents the hens agrees to keep them in good health and to make good any hens lost through theft or death.

Contract Bridge

By Harold B. Hach, Olympic Champion, Canadian Club, Toronto

The Responding Hand—Director—The fundamental factor in successful contract playing, and it is in the responses between partners that the precise truthful facts about the combined hands, are conveyed to the respective partners. This can be done quite accurately provided there is no interference bidding. The purpose of this article to show the value of correct, responsive bidding, predicated on the assumption that there is no interference bidding.

The original bidder opens the bidding with a bid of one. This bid immediately tells the partner of the bidder, that the bidding hand contains at least three or four high cards, and that the original bidder thinks that these high cards, under average conditions, will take two to three tricks against any bid the opponents may make. The bid also says, that in the declared suit, the bidder guarantees that he will take a minimum of four to five tricks, provided the deal is played in the original bid suit.

Normal expectation of the responding hand is three taking tricks in the declared suit. The responding hand then, with three or less taking tricks in the original declared suit must deny the original bid by either a pass or another bid. The latter must be firmly fixed in the mind of the player that it is on the correctness of the first response that the success or failure of the particular deal is based. And that also the function of the responding hand, is to bear the brunt of the bidding.

The responding hand has four bidding possibilities provided there is no adverse bid. These are the raise, the pass, the takeout and the jump-shift or forcing bid.

The Raise:—If it is decided to raise the original bid, the full raise should be given immediately. And the full raise is the number of taking tricks above the normal expectation of the particular deal is based. One heart is the original declaration, and the responding hand will take three or less taking tricks in the original declared suit must deny the original bid by either a pass or another bid. The latter must be firmly fixed in the mind of the player that it is on the correctness of the first response that the success or failure of the particular deal is based. And that also the function of the responding hand, is to bear the brunt of the bidding.

The Pass:—If the responding hand contains no raise, no bidable suit, and less than one honor trick, the correct bid is pass. Hands which are freckled in distribution are exceptions. Freak hands may be bid with pass on a honor trick.

The Takeout:—This is a bid in another suit or no trump. It must, in the early stages of the bidding, be constructed by the original bidder as a denial of the original bid. In effect it may not be a denial as the responding hand may have more than normal expectancy in the original bid, but may have a powerful suit of its own, many cases the takeout is made to find out if the hand "fits." If the two hands can support each other's bid, the hand does sit and high cards can usually be made.

A second takeout of the original bid is a definite denial and tells partner it is best not to play the hand in the original declaration unless the original bidder's hand is exceptionally strong in the suit bid.

The Forcing Takeout is never a denial of partner's bid. In other words a forcing response should not be made, as a rule, unless the forcing bidder has at least neutral support in the original declaration. By neutral support is meant two trumps at least. However a forcing takeout may be made without even neutral support in the original bid, when the forcing bidder's suit is so strong, that trespass-

ing on partner's bid is justified. "What gives you the impression that Jack and Betty are engaged?" "She has a ring and he's broke."

Most children become right-handed through training.

Scotland has many new housing projects.

Americans pay millions less in corporation and income taxes.

Americans paid \$803,167.36 less in corporation and income taxes during the fiscal year just ended than in the year before, the Bureau of Internal Revenue reported.

This shrinkage in revenue and the increased government expenditures resulted in the greatest peace-time treasury deficit in the history of the country. It necessitated passage of a billion dollar tax bill and another measure designed to save \$150,000,000 in government expenses. The deficit was officially placed at \$2,885,000,000.

SETTLE 'N ALL

Disinfective Mary Altkin photo-graphed atop her gigantic outfit along with her highland duds and pet trelle. Recently four hundred members of the Native of Glasgow Eire Party from the western provinces marched to Winnipeg and departed for doctore at Montreal aboard a special Canadian Pacific train. Aboard the "Duchess of Bedford" the party will be accompanied by an additional eight hundred highland Scots—all homeward bound. Mary is travelling with them from Vancouver to Kilbride, Ayrshire, and the kettle goes along too!

The original bidder opens the bidding with a bid of one. This bid immediately tells the partner of the bidder, that the bidding hand contains at least three or four high cards, and that the original bidder thinks that these high cards, under average conditions, will take two to three tricks against any bid the opponents may make. The bid also says, that in the declared suit, the bidder guarantees that he will take a minimum of four to five tricks, provided the deal is played in the original bid suit.

Normal expectation of the responding hand is three taking tricks in the declared suit. The responding hand then, with three or less taking tricks in the original declared suit must deny the original bid by either a pass or another bid. The latter must be firmly fixed in the mind of the player that it is on the correctness of the first response that the success or failure of the particular deal is based. And that also the function of the responding hand, is to bear the brunt of the bidding.

The responding hand has four bidding possibilities provided there is no adverse bid. These are the raise, the pass, the takeout and the jump-shift or forcing bid.

The Raise:—If it is decided to raise the original bid, the full raise should be given immediately. And the full raise is the number of taking tricks above the normal expectation of the particular deal is based. One heart is the original declaration, and the responding hand will take three or less taking tricks in the original declared suit must deny the original bid by either a pass or another bid. The latter must be firmly fixed in the mind of the player that it is on the correctness of the first response that the success or failure of the particular deal is based. And that also the function of the responding hand, is to bear the brunt of the bidding.

The Pass:—If the responding hand contains no raise, no bidable suit, and less than one honor trick, the correct bid is pass. Hands which are freckled in distribution are exceptions. Freak hands may be bid with pass on a honor trick.

The Takeout:—This is a bid in another suit or no trump. It must, in the early stages of the bidding, be constructed by the original bidder as a denial of the original bid. In effect it may not be a denial as the responding hand may have more than normal expectancy in the original bid, but may have a powerful suit of its own, many cases the takeout is made to find out if the hand "fits." If the two hands can support each other's bid, the hand does sit and high cards can usually be made.

A second takeout of the original bid is a definite denial and tells partner it is best not to play the hand in the original declaration unless the original bidder's hand is exceptionally strong in the suit bid.

The Forcing Takeout is never a denial of partner's bid. In other words a forcing response should not be made, as a rule, unless the forcing bidder has at least neutral support in the original declaration. By neutral support is meant two trumps at least. However a forcing takeout may be made without even neutral support in the original bid, when the forcing bidder's suit is so strong, that trespass-

ing on partner's bid is justified. "What gives you the impression that Jack and Betty are engaged?" "She has a ring and he's broke."

Respect the Man

Brief Sketch of the Democratic Presidential Nominee.

The honorable and gallant gentleman, as British M.P.'s are called by their fellow countrymen, who has stood before the Democratic convention in Chicago and accepted its nomination for president.

To one seeing him for the first time the degree of his physical infirmity, though he has made immense gains since stricken by infantile paralysis eleven years ago, was startling. He walked with painful slowness to the dais, one hand on a stout cane and the other in the arm of his towering son, James.

He had flown from New York on a rough day and this, as air travel is still comparatively uncommon in the United States, appeared to most of the delegates a highly venturesome thing to do. As he gripped the desk with both hands before speaking, he appeared to be overcoming his fatigue with difficulty.

Once he was launched on his speech there was no thought of the fact that the governor is well over six feet tall, strongly built and apparently, but for his lameness, in vibrant health. His speech was of great vigor.

As a speaker he falls just short of arousing enthusiasm. Considerably more magnetic than President Hoover on the platform, he is too reserved and chooses his words too carefully to give the audience response that Theodore Roosevelt could obtain.

The Chicago citizens in the galleries began to leave the hall in numbers after a few minutes, but the delegates on the floor were sympathetic and intent. The unsteady gait of the King of Kings and the crackling and flash of the press cameras were the whole scene a theatrical air.

The governor spoke earnestly and with few gestures, but his face was animated and his grave lines became firmer as he made a point. Now and then he would smile and nod and as he raised his arm in a final greeting he was given perhaps the most spontaneous ovation of the sixty-day session.

Something New In Dentistry

Stainless Steel Now Being Used In Place Of Gold

Something new in dentistry—the use of stainless steel in places and other appliances—will be described at the joint convention of the British, Canadian and Ontario Dental Associations to be held in Toronto during August. The world has long been accustomed to steel in bridges, and now it is being used in dental bridges as well.

Originally developed in Germany, much work on the use of stainless steel in dentistry has been done. In the construction of plates, clasps, bands and other dental appliances has been done in Great Britain.

Some work has been done in Canada, according to members of the faculty of dentistry at the University of Toronto, but the time has not yet come when every dentist is prepared for this new type of treatment.

Shrinkage In Revenue

Americans Pay Millions Less In Corporation and Income Taxes

Americans paid \$803,167.36 less in corporation and income taxes during the fiscal year just ended than in the year before, the Bureau of Internal Revenue reported.

This shrinkage in revenue and the increased government expenditures resulted in the greatest peace-time treasury deficit in the history of the country. It necessitated passage of a billion dollar tax bill and another measure designed to save \$150,000,000 in government expenses. The deficit was officially placed at \$2,885,000,000.

Banks: "You and Smith don't seem so friendly nowadays. Does he owe you some money?" "Harris: "No, but wants to."

A recent explorer of sub-Antarctic Canadian regions estimates that 2,500,000 caribou are killed yearly in Canada by wolves.

NEW INVENTION DOES AWAY WITH COOKING ODORS

Even fish and cauliflower bow down to Canapar Cookery Parchment

BETTER, CHEAPER AND EASIER COOKING

Delicious as cauliflower, cabbage and certain other vegetables are, they have imposed a heavy penalty on people who have cooked them. Not for nothing those who had to suffer the odor without enjoying the finished product. The same thing is equally true of fish.

Canapar Cookery Parchment, a very ingenious invention, does away with this annoyance entirely. While sealing in odors, it also retains flavor and food value. Cooking in Canapar simply parallels the famous French method of steaming and confining food and its flavor in the closed casserole.

You buy Canapar in large envelopes of heavy-duty sheets which may be folded out and used over and over again because they are completely washable. When finished, you simply wet the Canapar and discard the sheets. When you are through, you wash the sheets and use them again. You can actually cook three vegetables at once in the same Canapar, this way saving space and time. It is so simple and so economical, it is not surprising.

Salmon steaks, fish cakes, corn on the cob and steaming in its own juice. No odors. No sticky steamer or casserole. Use your roasting pan with Canapar, and you can use it for anything you want. It is so easy and so economical, it is not surprising.

Use your roasting pan with Canapar, and you can use it for anything you want. It is so easy and so economical, it is not surprising. Use your roasting pan with Canapar, and you can use it for anything you want. It is so easy and so economical, it is not surprising.

Special Offer
Most grocers, druggists and department stores carry Canapar. Write for a free trial and the coupon and we'll give you a new and unique "Canapar" recipe book for your trouble.

Asphodel Paper Products, Ltd.,

Enclosed find \$10 for which please send me one Canapar for my trial. I will send you my receipt for "Left-over."

New War Toy

Great Britain Produces Super Machine Gun With Great Possibilities

Great Britain has a new war toy that can be called the most important record. It is not much heavier than the ordinary service rifle, but it is really a super machine gun firing 100 rounds a minute. It is a machine. What is more, it is said to be easy to operate, hard to jam and, as equally important, it is easy to transport. Use in this rapid firing piece German's new bullets, which have done the most damage in the war, are made of lead and penetrate half-inch chrome-nickel armor as well as five-inch thick armor plate, and will be even more than Sherman said it was.—The Pathfinder.

Recipes For This Week

(By Betty Baxam)

COCONUT REA FOAM FROSTING

1 cup brown sugar.
1 egg boiling water.
1 egg white, stiffly beaten.
1 tablespoon vanilla.

Can coconut, southern style.
Cooking sugar and water. Place over low flame and stir constantly until sugar is dissolved and mixture boils. Continue cooking until a small amount of syrup forms a soft ball in cold water, or spins a long thread when dropped from tip of spoon (340 degrees Fahrenheit). Pour syrup in fine stream over egg white, beating constantly. Add vanilla. Continue beating until stiff enough to spread on cake. Spread on cake and sprinkle thickly with coconut while frosting is still soft. Make enough frosting to cover top and sides of 8 x 8 inch cake.

ARABIAN FEEDING

Five tablespoons butter, 1 cup light brown sugar, 1 egg yolk, 1 cup cold strong coffee, 1/4 teaspoon vanilla, 1 dozen lady fingers. Cream the butter, add sugar gradually, and then the egg yolk. Add coffee and vanilla drop by drop (if coffee is added quickly the mixture will curdle). Place 2 or 3 lady fingers in a pan or shallow glass and cover with coffee mixture, then set in ice box for 5 hours.

Bread prices in Scotland are rising.

Keep Well with Eno's Help

If you are healthy, take ENO... When you are not well, take ENO, for in most cases the beginning of all ailments is in the intestinal tract. ENO'S "Fruit Salt" aids the intestinal tract of all the accumulated poisonous waste matter. Be ENO conscious. Start taking ENO'S "Fruit Salt" to-day.

ENO'S FRUIT SALT

Another Naval Conference

Proposal Made To Discuss Further Reduction Of Sea Forces

Great Britain has launched a move for another five-power naval conference aimed at further reductions of sea forces. The proposal for a five-power naval conference between Britain, the United States, Japan, France and Italy was advanced by a high British authority in a press interview.

He proposed that it be held in the interval before the world disarmament conference resumes its activities in the fall.

The proposal came at the same time as publication of the detailed British naval disarmament proposals in London, in the course of a statement by Stanley Baldwin, welcoming the Hoover plan for a one-third reduction in world armaments.

Spokesmen of the other powers at the world disarmament conference withheld comment on the British proposal, although representatives of the United States were critical of the British naval disarmament proposals. "The naval questions are most complex and require extensive and frank discussions on the part of those concerned," said the British spokesman of the conference proposal, in an interview in which his name was withheld, by agreement.

"President Hoover himself will be the first to agree that naval reductions cannot be accomplished by the mere mention of a vulgar fraction."

The London and Washington governments were in agreement on the principle of further and substantial naval reductions, the British spokesman said. He backed up the British declaration in London on the impossibility of numerical reduction of naval units beyond a certain figure for a power like Britain with world-wide interests.

United States naval experts criticized the British plans for cutting down the size of capital ships, aircraft carriers and cruisers and cruisers in future naval armaments. One of them characterized it as the renewal of a 10-year-old controversy in which the British have sought by reducing the size of our ships to keep our navy in home waters.

Canada's Precise Level Met

Covers Dominion used to Represented by Mean Of Figure

What is known scientifically as the precise level met of Canada now covers the Dominion and a mass of figures is required to represent the elevation above sea level of the various localities indicated. These figures are carefully computed by the Geodetic Survey of Canada, Department of the Interior, and are based on mean sea level obtained from five tidal stations namely, Yarmouth, St. John's, St. Lawrence, and Vancouver and Prince Rupert on the Pacific coast. The figures are necessary in the laying out of towns, the building of bridges, engineering and irrigation work, and they are also the basis for all other survey measurements and computations.

Salt placed in the water will preserve the freshness of flowers.

Pains In Stomach and Bowels So Bad Would Have To Sit Down

Mrs. G. Landry, Montreal, N.B., writes: "I can certainly recommend Dr. J. C. Fowler's Wild Strawberry for cramps or pains in the stomach and bowels."

"Last Summer I had such awful pains in my stomach, and lower part of my bowels at times, I would have to sit down. I took Dr. J. C. Fowler's and was soon relieved."

"When my children were small I always kept a bottle of it, and it helped them wonderfully whenever they had bowel complaints."

Lifting the War Debt

Lausanne Conference Result Has Optimistic Effect

The success of the Lausanne Conference is more convincingly attested by the optimistic effect on international stock and commodity markets than by political speeches. The effect has been more marked in London than elsewhere. The fact is that the statement at Lausanne reached a degree of accord thought to be impossible a few days ago.

One-half of the war-debt problem has been solved. Such is the net effect of the Lausanne conference. It is true that Germany is to make a final payment of about \$750,000,000 at some future undated date. But the money is to be raised by domestic bond issue, to be redeemed over a period of many years. For all practical purposes reparations have come to an end.

It remains to be seen whether the delegates at Lausanne were justified in their expectations of the future attitude of the United States. The European settlement would have been ridiculous, of course, unless there had been confidence that Washington would wipe the war-debt slate clean immediately after the presidential election.

There is the remote possibility that some stern irreconcilable will again try to whip up anti-European sentiment among Americans and force Congress to insist on further war-debt collections. But the prospect is slim. Nearly everyone in the United States knows that Europe, as a whole, could not continue to pay war debts, even if she would. Every one should also know that with the question of Britain no European country would now pay any more war debts, unless literally forced to do so.—Toronto Globe.

Shoey Animals Cheap

Low Prices Quoted By Dealer To Crown Masquerade

That old-fashioned custom of having an ordinary dog or tom-cat around the house will go by the board as soon as the public learns that showy pets may be acquired dirt cheap. According to a price list submitted by a New York animal dealer to crown masquerade, you may pick up a canis cynocephalus dog for only \$500. Get one of those and your pet will be a real show pet. It will look like a fat-fish, for a canis cynocephalus is a raccoon dog from the heart of Africa.

Or, if you wish to be a bit flashy, walk down the street with a pair of lions on leash. You may have them for a mere \$250. A nice big jaguar is listed at \$1,500, and an Orang-Outang may be had for \$2,000. Deception prices. And look at these: Turkistan porcupine \$100; Australian possum or glaucous black swan \$100; polar bear \$250; Alaskan tortoise (weighing 100 pounds) \$125.

Not interested? Well, here's a snap: A big Siberian tiger for only \$4,500. Then again you may want something a little more exotic. A Capuchin monkey, the most ferocious living animal, for \$600. If it so happens you are a cross-word puzzle fan, you may have an enigma for the price of \$100.

Now here's a thought. Sold your car this year? Then you may have a pair of Icelandic canines for \$700, about \$800 under the regular price. A Patagonian hare is practically given away, at \$40, or an Italian elephant, standing four and a half feet high, and guaranteed sound in wind and limb, for \$2,000. A pair of young male hippopotamuses will set you back only \$2,500 and a pair of pigmy hippos are available at \$2,500.

Build Feeding Station

Large Stock Yard To Be Located At Hudson Bay Junction

Contrary to recent dispatches emanating from The Hudson Bay, a large stock yard, capable of feeding two train loads of cattle at one time will be built near Hudson Bay Junction this summer. This information was given to J. I. Crook, president of the Hudson Bay Junction Board of Trade by Mr. Byron Horner, director of the Canadian National Railways in Prince Albert.

The Hudson Bay Junction is chosen by the company as the last feeding point for cattle going over the Hudson Bay line, and will also be used extensively for accommodation of cattle going to eastern markets. Eighty pens will be constructed with complete equipment for slaughtering and feeding. Necessary facilities are already ample to care for a large volume of traffic, with plenty of room for expansion. This location was chosen in view of the quality of native upland hay growing in the country.

Lake Ponchartraine is a body of salt water in southeastern Louisiana.

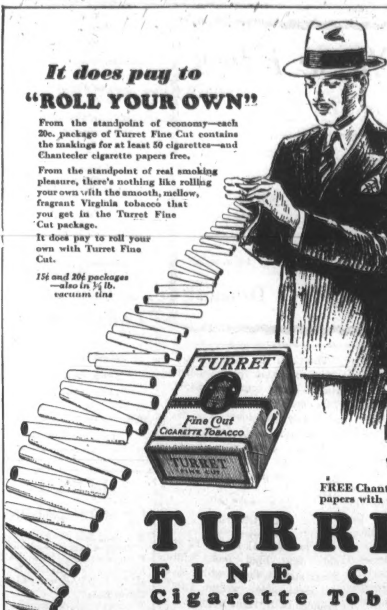

It does pay to "ROLL YOUR OWN"

Measure Of Defense

Norway To Occupy Strip Of Greenland For Protection Purpose

The Norwegian Government has decided to occupy a strip of south-eastern Greenland, two miles wide, between latitudes 60 degrees 30 minutes and 60 degrees 40 minutes. The occupation, said an official statement, is a measure of defense which Norway has been forced to take, Denmark having given police authority to its expeditions to east Greenland last year. The statement also said that in late years Danish authorities have tried to close west Greenland to foreigners and thus prevent whalers and fishermen working in the open sea from calling at Greenland ports for water.

THE RHYMING OPTIMIST

By Alice Michels

THE DOLE OF LOVE

The beggar cried: "A crumb, a crumb! By weakness I am curst; I pride in humbleness in dust, I hunger and I thirst!"

Then eager hands and gentle hands Reached forth to give him aid, This weary wretch from foreign lands, By life's strange turns betrayed.

It is so easy to be kind
It is so easy to be blind
It is so easy to be blind
To near others, dear ones' woe.

A stranger's mournful tale will move
The full the quick tears start;
But all the acuity does of love
We give to hungry hearts!

Love the spirit must be fed
If it would grow and thrive;
Love is the meat and drink and bread
Which keeps the soul alive.

Much Cheaper Too

University home economics experts say "apple meringue" is a pleasant substitute for whipped cream; grate an apple, add two or three tablespoons of sugar, and beat with the white of one egg until it is light.

Once a woman looked back and turned into a pillar of salt, now she turns into a telephone pole.

Try Lida's Food's Vegetable Compound

Too "Worn-Out" to go
Another day broken... Could's stay in bed for a month longer! Lida's Food's Vegetable Compound always relieves cramps. Try it next month.

Little Helps For This Week

My voice shall roar, then hear in the morning, O Lord.—Psalms vi. 8.

Lord, in Thy light, oh, let me walk this day.

By Thy love prompted, act, and speak, and pray.

As a new creature it becomes to do, Whose aim it is, in all his words and ways.

To set forth daily his Creator's praise, And new in heart, in life be also new.

—Lyra Domestica.

From the night an spirit awakened, unto Thee, O God! for Thy prayers are a light unto us. Teach us, O God, Thy righteousness, Thy commandments, Thy judgments. Enlighten the eyes of our mind that we sleep not in sin unto death. Drive away all darkness from our hearts. Vouchsafe us the sun of righteousness. Guard our lives from all reproach by the seat of Thy Holy Spirit.

Grant us the steps in the way of peace. Grant us to behold the dawn and the day with joyfulness, that we may stand up our prayers to Thee at evening.—Thomas A. Kempis.

Market For Honey Could Be Extended

If People Used It For Other Meals Than Breakfast

If you want to know what the public think of honey, put it on the table before a group of representative people.

If the meal be breakfast, the honey is likely to be a popular drink; if any other meal, it will probably be ignored. Recently a group of a dozen young ladies were observed at the evening meal, honey was on the table, but not one of them touched it.

The following morning, when a group of these same girls set down to breakfast, every one of them ate honey. The public regards honey as a spread for cakes or bread for breakfast, and not as a condiment for other meals.

The public regards honey as a spread for cakes or bread for breakfast, and not as a condiment for other meals.

The public regards honey as a spread for cakes or bread for breakfast, and not as a condiment for other meals.

A pleasant medicine for children is Mother Graves' Worms Expeller, and it is excellent for driving worms from the system.

Authority On Drugs

In these days of rapid progress in scientific science, it is interesting to reflect that Dioscorides who wrote his "Materia Medica" in the first century A.D., remained the recognized authority on drugs for 1,600 years.

Raising the average child in the average family until it is 18 costs its parents about \$7,300.

Real jewels again are vogue in London.

New Form Of Illumination

A new light has been invented which, it is said, may soon change the history of electric lighting. The illumination is produced by carbon dioxide gas, introduced into clear glass tubes under proper electric current, produces a steady white light having all the qualities of daylight. Carbon dioxide gas is not poisonous, as is carbon monoxide gas, used for heating and illuminating.

Farmers of this district have now commenced cutting some of their early sown grain which did not develop as well as that sown later. As the straw is very short most of it is being cut with headers or gathered in improvised boxes attached to the binders. It is expected to average from 6 to 10 bushels to the acre. Later sown crops should average considerably more but rains now badly needed in order to make this possible in LOVING MEMORY

In loving memory of a dear husband and father, Charles E. Oakland, who died in Col. Belcher hospital, Calgary, July 27, 1932. "Worthy of Remembrance" From his wife and sons, Edward and David.
